ABSTRACT

This document comprises a report on transiency and stability for the Los Angeles Unified School District (LAUSD) for 1987-88. Transiency refers to the number of students who enter and leave during the school year expressed as a percentage rate. Stability refers to the student population that has remained in the school all year expressed as a percentage rate of the starting enrollment. Data were gathered from all regular, magnet, and special education schools relating to the number of students who entered and left each month. Data for continuation and opportunity high schools, community adult schools, and skills centers were not included. Rankings were computed for each group with a district summary. The following findings are reported: (1) schools of choice (magnet schools and centers) had the highest stability and lowest transiency rates; (2) elementary schools tended to be more stable and less transient when compared to district-wide averages; (3) senior high schools tended to be more transient and less stable when compared to district-wide averages; and (4) the 1987-88 transiency rates appear to be higher than in previous years and the stability rates appear lower due to refinements in the formula used for analysis and do not suggest substantially different transiency and stability patterns. The following statistical data are included on nine tables: (1) overview results for the district; (2) results for elementary, junior high and senior high schools, schools of choice, and special education schools arranged in alphabetical order by school; and (3) summary rates for transiency and stability since 1968. ABSTRACT

This transiency and stability report for the Los Angeles Unified School District, 1987-88, continues the series that has been published annually for 2 decades.

Transiency refers to the number of students who enter and leave during the school year, and is expressed as a percentage (rate). Stability refers to the student population that has remained in the school all year, and is expressed as a percentage (rate) of the starting enrollment.

The formula for computing transiency and stability rates for 1987-88 includes interstate transfers; therefore, the rates for this year are not comparable to those of previous years.

Information has again been gathered from all regular, magnet, and special education schools relating to the number of students who entered and left each month. Rankings were computed for each group with a district summary.

The data suggest that schools of choice (magnet schools and centers) had the highest stability and lowest transiency rates. Elementary schools also tended to be more stable and less transient compared to district-wide averages. Conversely, students in the Senior High School Division were more transient and less stable than the typical LAUSD student.

BACKGROUND AND INTRODUCTION

Beginning in 1968-69, the Research and Evaluation Branch has published an annual report on student transiency activity in relation to school enrollment. In the 1974-75 and later studies, stability rates were reported with transiency rates.

Because transiency and stability are not reciprocal concepts, the sum of their rates is not required to equal 100%. Each concept is computed separately, although some counts of students are common to both formulas.

For the 5th year, the stability formula does not count leavers in the 1st school month, nor graduates from one grade to the next.

The formula for computing transiency and stability was revised for 1987-88, to include interstate transfers. Therefore, transiency and stability rates for this year cannot be compared to those of previous years.

It is important to note that fluctuations in annual transiency and stability rates reflect more than ordinary entering and leaving. For example, in recent years, changes in attendance patterns may have resulted from new magnet programs or reconfigured grades. Therefore, small shifts in the rates for individual schools may include extraneous factors. Group data, such as regional or district totals, may reflect a more accurate and stable index of transiency and stability.

In the present report, as last year, magnet programs include schools and centers as well as alternative schools. Year-round schools are again listed with the regular schools.

Transiency and stability rates for special education schools appear in this report for the first time, at the request of the division office. Since special education schools have different attendance patterns, they do not appear in district totals. Also, since Carlson Hospital has an unusual pattern of entrants and leavers, they are not included in the Special Education summary.

Not included in this survey are data for continuation and opportunity high schools, community adult schools, and skills centers.

DEFINITIONS

For this report, these definitions apply:

Entrants (E) in this report are students entering during the school year, with the exception of those returning to the same school at the beginning of the school year (E1).

Categories of entering students included in this study are:

- E2 entering from another school within LAUSD
- E3 entering from another California public school outside LAUSD
- E4 entering from a nonpublic school in California
- E5 entering from a school in another state or country
- E7 enrolling for the first time (generally kindergarten or 1st grade)

Leavers (L) in this study are students leaving any time during the school year, except those graduating (L7) and those leaving one grade or program to enter another in the same school (L1).

Categories of leaving students included in this report are:

- L2 leaving for another LAUSD school
- L3 leaving for another California public school outside LAUSD
- L4 leaving for a nonpublic school in California
- L5 leaving for a school in another state or country
- L8 leaving without giving the school enough information about destination or reasons; thus, categorized as unknown, dropped, or other

Rank refers to ordering the transiency and stability rates for schools listed in Tables 2 through 5, with the highest rate receiving rank 1. Thus, rank 1 for stability indicates greatest holding strength, but rank 1 for transiency indicates the highest mobility. Each table contains unique rankings within its pattern that cannot be directly compared to other years' rankings. Table 1 gives region and division rankings.

Rate refers to the percentage term calculated by the formulas for stability and transiency. A school with a high stability rate and a low transiency rate has excellent holding power.

School Month refers to a period of 4 weeks or 20 school days. There are 10 school months in 1 school year, usually covering about 9 calendar months.

School Year: see School Month.

Schools of Choice or magnet programs are part of the district's voluntary integration program. Magnet schools and centers (including four alternative schools) are available to LAUSD students, grades K-12, by application. A program may include the entire student body or selected grades. Each program emphasizes a particular field of interest such as science, performing and fine arts, or business. Gifted and high-achieving students study in programs that emphasize accelerated learning and creativity.

Stability approximates the student population that has remained in the school all year. It is computed by subtracting all school-year leavers from the starting enrollment, and is expressed as a percentage (rate) of the starting enrollment. See Formulas.

Transiency refers to the adjusted number of entrants and leavers for the year. It is expressed as a percentage (rate) of the 10-month enrollments averaged. See Formulas.

FORMULAS

The formulas for stability and transiency are explained as follows:

Symbols Used

AVG	average enrollment of 10 school months (i.e., sum of enrollment of month 1, month 2, ...month 10 divided by 10)
E	adjusted number of entrants for the school year: this includes all E2, E3, E4, E5, and E7 students for school months 2-10; excludes all Es in month 1; excludes all E1 students for months 2-10
L	adjusted number of leavers for the school year: this includes all L2, L3, L4, L5, and L8 students for school months 2-10; excludes all Ls in month 1; excludes all L1s for months 2-10
M1	enrollment for school month 1
S	stability rate for school year
T	transiency rate for school year

Formula for Stability

Stability equals enrollment for school month 1 less adjusted number of leavers divided by enrollment for school month 1, times 100--yielding a percentage term, the stability rate.

$$S = \frac{M1 - L}{M1} \times 100$$

Formula for Transiency

Transiency equals adjusted number of entrants plus adjusted number of leavers divided by the average enrollment for the 10 school months, times 100--yielding a percentage term, the transiency rate.

$$T = \frac{E + L}{AVG} \times 100$$

Notes about the formulas:

- All Es and Ls in school month 1 are excluded from consideration as separate categories because they are already represented in the M1 baseline enrollment.
- "Adjusted number" refers to the inclusion or exclusion of types of E and L students, listed under Symbols Used.
- Es include the E5 category.
- Ls include the L5 category.

USING THE TABLES

Overview results for the district appear in Table 1, and results for elementary, junior high, and senior high schools, schools of choice, and special education schools follow in Tables 2-6. The schools are listed in alphabetical order, with numeric titles presented first in the sequence.

For Tables 1-6, the headings are explained in the Definitions section of this report. Please note that entrants and leavers represent accumulated totals for the entire school year.

Summary rates for transiency and stability since 1968 are shown in Tables 7-9.

FINDINGS

The 84 schools of choice (magnet schools and centers) as a whole, and as subgroups in their region and division clusters, show the highest stability and the lowest transiency of all school groupings (Table 1). Conversely, Senior High Schools Division had the lowest stability rating and nearly the highest transiency rates.

It is important to note that the 1987-88 transiency rates appear higher than in previous years while the stability rates appear lower. However, these changes reflect only the formula refinements and do not suggest substantially different transiency and stability patterns in LAUSD.
